Free View: If you are using AutoCAD on a computer with more than two monitors, you may have a question about where to go in AutoCAD to view the current drawing. The Free View feature allows you to check the current drawing from any screen in the program. This feature is very handy for quickly checking a drawing. 3. Filters: Filters in AutoCAD offer a quick way to change the appearance of drawing objects such as layers, linetypes, fonts, and colors. 4. Layered Modeling: When objects are added to the drawing, the drawing is automatically updated with the new objects. 5. Line Precision: When a line is drawn, it is measured and recorded so that measurements can be accurately repeated. 6. Markup Views: AutoCAD users can view any viewable drawing through various menus, including the entire drawing, one section at a time, or selected views. 7. Models: Allows you to create geometrical shapes, textures, and colors. 8. Masters: Templates for common types of drawings. What are some features unique to AutoCAD? 1. Chaining: It allows you to easily work on multiple drawings using one menu command. When you create a new drawing, or open an existing drawing, AutoCAD opens that drawing by default. Then, you can continue to open new drawings by clicking the Chaining button on the main menu bar. In this case, AutoCAD creates a drawing that has the last opened drawing as a base layer. 2. Commands: AutoCAD contains thousands of commands that allow you to draw, modify, and analyze geometry. 3. Dynamic Filtering: Allows you to filter objects in the drawing by color, linetype, layer, path, or drawing number. This can be a very useful feature if you have a large drawing with many objects. 4. Optional Drawing Updates: You can choose to have your drawing automatically updated each time you open a new drawing or open an existing drawing. 5. Object Snap: This feature allows you to quickly place a 2D or 3D object on a 2D drawing
