The KEYMACRO is designed for high-speed MIDI keyboards, strings, effects, sample libraries, performance software, music composition tools, etc. KEYMACRO can be used by external devices or software that is not KEYMACRO itself. Like all other products from the MusicVoxo family, the KEYMACRO is entirely sample free, no samples, no recordings, no samples, no nothing. It's a pure, physical analog synth. All the waveforms, the oscillators, envelopes, filters, and effects are all created with custom hardware and software. The KEYMACRO is very flexible. The 3.5mm input can be changed to a CV/Gate output, an external speaker, a pre-amp, or a simple MIDI input. The pitch can be changed from the internal pitch value to any external value, and the modulated pitch can also be adjusted. The KEYMACRO has a wealth of analog tape-style tape echo effects, and

can be used as a 2-oscillator step sequencer or random trigger generator. The 512 bank of patterns is fully programmable, and contains a variety of digital delay, repetition, and waveform-shifting effects. Even though this is a sample-free product, it is not really meant to be used in a raw state, and can be used as a MIDI-to-CV converter or a CV-to-MIDI converter. If you have a sequence of MIDI CCs, and you want to play the keys in sync with it, you can do that easily. A special feature of the KEYMACRO is its ability to do two different types of "programs" at the same time. Many companies make products that have one MIDI output, but that is all they have. This is a keyboard synthesizer that has two separate outputs, each a different type of "program". One output produces a standard MIDI CC, and the other has a specific set of analog waveforms. So a musician can use the standard MIDI output to play standard CCs such as volume, panning, pitch bend, etc. and the analog output to play a ton of different waveforms that are not part of the standard MIDI message set, including square wave, sawtooth, noise, and more. At the keyboard level, the analog and MIDI outputs are completely separate. You can trigger one from the other, but you can also set a patch on one and not affect the other. A patch on one output can make absolutely no

PianoSR is designed to help you to generate Sympathetic Resonance to piano sound. It is a Physical Model Sympathetic Resonance Generator and by applying Latest Physical Model it will calculate how different acoustic instruments create different sounds. So the user can change different options to adjust how a specific instrument sounds to the best. PianoSR Features: Support 30 piano sounds and midi chords: Keyboards, Strings, Pizzicato, Harpsichord, Woodwinds, Brass, Electric Guitarr, Guitars, Mandolins, Flute, Voice Support 30 Sympathetic Resonance: Resonance of Strings, Steel, Glass, Wood and Wooden Branches For each Sympathetic Resonance option, it will generate the mapping based on the pianos playing range and frequency Support level of middle C for volume, enable or disable optional effect on each MIDI note (recommended: disable) As a Physical Model Synthetic Synthesiser, PianoSR combines Sympathetic Resonance and Frequency-Response to generate the sounds of acoustic instruments that is close to reality. The more you play it, the more Sympathetic Resonance generated and even with the same pianos playing range, you can hear how each different acoustic instruments sound. PianoSR has been developed to be a Physical Modelling Sympathetic Resonance Generator. By applying Latest Physical Modelling technologies, PianoSR could accurately simulate Sympathetic Resonance while maintain a small size and reasonable CPU usage. PianoSR only generates Sympathetic Resonance based on incoming MIDI signal. So it is very useful when used with other piano sample libraries which do not have Sympathetic Resonance function. It can adds color and liveness to piano sound and make it feels more reality when playing. PianoSR Description: PianoSR is designed to help you to generate Sympathetic Resonance to piano sound.
