History AutoCAD was initially created by Steve Jobs and Stephen Wozniak in 1977. Jobs suggested to his friend, Wozniak, to design a personal CAD system with which the two could collaborate on projects. Wozniak went to the HP factory where he saw a CAD system that was too expensive for the two of them to use, and he designed a cheaper system of his own. Jobs suggested he display a model of the first Apple product, the Apple I, on the screen, and Wozniak built a circuit for that purpose. This was the first-ever CAD software program, developed during the Apple II's first year. The first program was released in January 1978. According to the Autodesk 2011 corporate history, Autodesk CEO Stephen Chagares said that the first AutoCAD model was "a simple 2D floor plan of Steve and Steve's apartment." This CAD software is still commercially available today. It was Apple's first and only desktop CAD program until a month after the first release of AutoCAD, when Apple released a version of its own called Vectorworks. The first version of Vectorworks was released to a limited audience (only to Apple employees) in March 1979. In 1984, Autodesk sold Autocad as a software package, giving the customers the freedom to buy and use parts of the application that suited their needs. In 2002, a version of Autocad was released for Mac computers, adding to the Windows version. In 2006, the company released AutoCAD 2D, its first version of AutoCAD that allowed users to create 3D models. Also in 2006, the company introduced AutoCAD LT, a version of AutoCAD for people who don't want to buy an entire AutoCAD license. In 2007, the company introduced AutoCAD WS, the first version of AutoCAD to be released as a Web App for the Google Earth. In 2010, Autodesk acquired the first manufacturer of 3D scanners, Solidworks. In 2013, Autodesk released a version of AutoCAD for iOS devices. In 2014, Autodesk released AutoCAD LT for mobile devices. In 2015, Autodesk released AutoCAD Mechanical, which enables engineers to create 2D and 3D mechanical design for both automotive and industrial. The company also

released a new operating system, AutoCAD App, which is a mobile

Add Theoretical-Physical Factor (TPF) To Triple-8 In 2014 The first systematic review of the evidence relating to the use of the triple-8 clinical approach in the management of surgical patients was published in 2009.1 This systematic review concluded that the triple-8 clinical approach is a useful and practical aid for clinicians undertaking intraoperative clinical audits of patient safety. Since 2009, further evidence has been published in support of the triple-8 clinical approach. The first of these was an evaluation of the triple-8 clinical approach undertaken in the United Kingdom by the National Confidential Enquiry into Perioperative Deaths.2 This review concluded that the triple-8 clinical approach is a feasible method of performing an intraoperative clinical audit. In addition to the findings of the National Confidential Enquiry, other teams have used the triple-8 clinical approach as a reliable method for undertaking a clinical audit.3,4 The principle remains the same: standardising care, providing a framework for all aspects of perioperative care, and then seeking to identify and rectify the causes of adverse events. Given the clear need to improve patient safety, it is surprising that the triple-8 clinical approach has been largely ignored in the United Kingdom. One important reason for this is the fact that there is currently no formal training programme to facilitate its implementation. Another is that the triple-8 clinical approach requires an organisation to train, equip and dedicate resources to enable its implementation on a wide scale. As an immediate step to address this, the Liverpool Care Pathway was designed to support and promote clinical audit and to equip clinicians with the tools necessary to ensure that all patients are treated with dignity and compassion. It is now recognised that the Liverpool Care Pathway provides clinicians with the key tools to successfully and safely implement the triple-8 clinical approach. While the triple-8 clinical approach is being used in Europe, it has been implemented in only
