Group A: The intestinal segments were transported in vitro. Group B: The intestinal segments were transported in vivo. The intervals of storage, transporting and transplantation were recorded. In vitro, most intestine segments were stored for 12 hours in nutritive liquid or stored in a cooled nutritive liquid and transported for 8 hours. The interval of storing in vitro was 10 hours. The interval of transporting in vitro was 8 hours. The interval of transplantation in vitro was 6 hours. In vivo, the intestine segments were stored for 21 hours in nutritive liquid and transported for 8 hours. The interval of storing in vivo was 14 hours. The interval of transporting in vivo was 6
