ilgsu Laptop ga ade, pastebin.com doenload In Bed En La Cama torrentQ: If-statement to change CSS class with jQuery I have a problem when I try to do something with the HTML code. I try to update a table in a form with jQuery and PHP. It works for now. I have a $text_id (the ID of the text box) and a $select_id (the ID of the Select). I want to update $tr_Id for the jQuery to show that the $select_id has the new class $('.your-selection'). I have tried to use if-statement and I do not understand why it does not work. I have tested it and it just works when I delete the if-statement. How can I do it correctly? $(document).ready(function(){ $('input').each(function(i){ $('label').eq(i).addClass('your-selection') }); }); .your-selection { color: #ff0000; font-family: "Arial"; } " method="post"> prepare("SELECT text,select FROM test2"); $my_stmt->execute(); $result = $my_stmt->get_result(); $data = array(); //loop through all results, storing each row in variable
