**What's new:**

(band) Open Roads is an American post-rock music group that was formed in 2011 by Ariel Rechtshaid (known as the drummer for math rock band Car Seat Headrest) and Rebecca Cole after they met while working on films and found out they had similar taste in music. After a year of recording and writing material, the two went into the studio and recorded a debut album together titled *Relatively Dreamless Mornings*. In 2013, following the release of *Relatively Dreamless Mornings*, the band signed with French indie label I2 and began work on their debut album. In 2015, Open Roads released an album titled *The River*. Side projects In 2014, Rebecca Cole recorded a solo album titled *Dream Bomb* under the name *Cohere* and another solo album titled *Alarm*. In 2016, Ariel Rechtshaid and Rebecca Cole formed another band called *Car Seat Headrest*. In 2017, Cole became a vocalist and guitarist for the British emo punk rock band *Good Cop Bad Cop*. While working on *The River* (2015), member Devon Cole started a solo project in the same style as "The Blue Black Hole" called *Daydream Alley*. It was released in 2017. After she went to the Newport Folk Festival, Ariel Rechtshaid went on to produce the album by *The Bronx* from the view of an outsider, being a born and raised New Yorker. Musical style The band's sound has been described by some sources as electronic post-rock, broad cosmic pop, post-rock, minimalist IDM, math pop, or indie pop. Uproxx described Open Roads' sound as "uplifting R&B in the vein of One-X and Kids of 88, with a touch of beat-drenched electronica and a love for disjointed classical music". Their sound has been compared to *All Time Low*, *Kamelot*, *James Blake* and *Radiohead*. Members Rebecca Cole Born in Texas and currently based in Pittsburgh, PA, she began playing cello in 2004 and soon became the first member of her high school glee club. 1. Technical Field The present invention relates to an image pick-up unit that takes pictures of an object. 2. Related Art There is a known image pick-up unit that takes pictures of an object while rotating around a vertical axis (for example, see JP-A-2006-358534). In the image pick-up unit, the magnetic flux density generated by an exciting coil increases to the maximum in a direction perpendicular to an optical axis of a lens from a position of rotation. Therefore, the magnetic flux density in a direction parallel to the optical axis of the lens is lowest at a position of rotation. Thus, the image pick-up unit is configured in a way that covers a region detected by a sensing device.
