W300V1.0.0a ZRD Lk Firmware.rarl A: Remove the dot before the as and replace it with ; Here is the javascript for your reference: window.location = ''; Although you can't manage to do this thing, I would suggest you to use to convert the emoticon Q: What is the difference between end and start mode (streaming) in Spark Is there any difference between the streaming and the'regular' streaming, if I assume all the RDD's in a streaming are of type RDD[String] and that everything is connected (parallelized) and that all the RDD's in one stream have the same parallelism (say 2)? Then what is the difference? A: The difference between regular streaming and streaming is that you're executing all of the stages of regular stream processing on an executor (RDD), whereas with streaming you execute all of the stages of your pipeline on a driver. With regular streaming your input RDD is just data that is loaded directly into Spark, whereas with streaming your input RDD might be the result of a transformation. In the Streaming API the source of the data is the sink of the data. The source means that data gets loaded directly from somewhere, which might be from a file, JDBC, etc. A sink means that data gets sent to an external system, which might be a database, flatfile, etc. In streaming you can think of the source and sink like you would a producer and consumer. Spark just moves the data from the source to the sink. There is also a "transactional" mode of

streaming, where the source does not send data into Spark, but instead Spark collects the data directly from the source (e.g., using JDBC). This is useful when the source cannot easily be changed. 2007–08 IIHF Champions League The 2007–08 Champions League was the 38th edition of the
