In programming assignment is to create a program in c programming

language that can read. 0198099304, By Reema Thareja. Programming in C. 0198099304, By Reema Thareja. 0198099304, By Reema Thareja.Q: Why does my SQL statement fail? I am trying to execute a simple query to retrieve "student username" and "password." I am submitting the following statement: select student_name, password from student_table where student_name = "name" This statement fails on the query server. The failing SQL statement is this one: select student_name, password from student_table where student_name = "name" My question is, why? A: name is a function, so presumably "name" is a string which is stored as a varchar. Use 'name' for a literal string. A: Either use string literals or replace 'name' with `name`. See the MySQL documentation: Single quotes, backticks, and double quotes in SQL statements.
