
LeechCraft\LeechCraft_Leeches.dll there is some function used to create the gui for download links. I replaced this function with my custom function. @"\$::GCW_Config->[Set]::{5DB6F284-0115-4C99-85DD-D8C04C6F7ABC}" with for /L %%x in (1 1 100) do @ "\$::GCW_Config->[Set]::{5DB6F284-0115-4C99-85DD-D8C04C6F7ABC}" This worked for me.

ATP hydrolysis by vacuolar H(+)-ATPase B subunit in the presence of bacteriorhodopsin. The light-driven proton pump, vacuolar H(+)-ATPase (V-ATPase) plays an important role in the acidification of organelles in a variety of eukaryotic and prokaryotic cells. The B subunit of V-ATPase binds to the F(1)F(0) complex and inhibits the ATP hydrolysis reaction. We report that the B subunit is involved in ATP hydrolysis in the presence of light-induced proton pump protein, bacteriorhodopsin (bR) in the membranes. When ATP was added to the solution, only hydrolysis reaction occurred in the dark, but in the presence of bR, both hydrolysis and synthesis of ATP occurred in the dark and in the light.

Dephosphorylation of ADP by the reaction in the dark, which was inhibited by bR, was not observed in the presence of bR. In the light, formation of phosphorylated intermediates was observed. These results suggest that the B subunit is not only related to the inhibition of ATP hydrolysis reaction, but also to the ATP synthesis reaction in the presence of

bR. We study the use of site-directed mutagenesis
