Title:Ã Bertrand Le VA. Q. How can I get an integral distribution of values from an integral distribution of weights? If I have discrete distribution of values, say [3.0, 2.0, 4.0, 3.0, 2.0] And I have a discrete distribution of weights (in the form of probabilities), say [0.25, 0.5, 0.25, 0.5, 0.25] I want to be able to formulate a discrete distribution of values that reflects both the weights and values of my original distribution. In the example above, I would want to get [3.0, 3.0, 3.0, 2.0, 1.0] How can I do this? Thank! A: You'll probably want to use the discrete convolution. For example, if $A = \begin{pmatrix} 3.0&2.0&4.0&3.0&2.0 \end{pmatrix}$ and $B = \begin{pmatrix} 0.25&0.5&0.25 \end{pmatrix}$ and we solve for the convolution: $C = A * B = \begin{pmatrix} 7.0&6.0&6.0&7.0&6.0 \end{pmatrix}$ Then: $C_1 = 7.07 = 0.981$ and: $C_2 = 6.07 = 0.857$ Thus, $C =$
