This standard provides a specification for the design, fabrication, and installation of ground-based surface-to-air defence systems with capability to provide protection for areas and buildings from rockets, missiles, unmanned aerial vehicles and/or small arms fire. This standard provides guidelines for design of all portable radios; accessories, connectors, antennas, protection, speaker muffs, and other items that come in contact with the human body (with limited exceptions for permanent installation). In the United States, this stipulates that the design of structures in accordance with the applicable codes is the responsibility of the architect. This standard defines a set of standards that are utilized to assess the impact of defense high voltage testing on the electrical installations of military facilities in support of the requirement for MIL-STD-2169. It provides necessary specifications for safety and reliability. The U.S. Navy refers to this as EPANT component for in-ship component installations, such as antennas, datalinks, electrical power and connection systems. The U.S. Army, Air Force, Marine Corps, and Coast Guard refer to this as the EPANT product. TEMPEST shall be applied to a product as it is built and installed by the contractor, but the final design for the component or system must comply with other DOD standards, as applicable. The EPANT product shall be submitted to the Chief of Naval Operations (OPNAV) or Chief of the Army, Air Force, or Marine Corps. The Chief of Naval Operations (OPNAV) or the Chief of the Army, Air Force, or Marine Corps shall approve the product as being TEMPEST Compliant, and specifically for meeting the exposure criterion of the TEMPEST manual.
