You need JavaScript enabled to view it. document. you need to make sure the the chipset and the realtek driver are installed correctly for the version of windows you have installed, at least for 7. If you haven't tried to install the realtek and chipset drivers from the vendor then maybe you need to download and install them first. MSDN (microsoft do-not-use) is a good place to go to find drivers for your specific hardware needs, or you can go to the realtek site and do a search for the chipset. Once you have the correct drivers installed it should work. if you connect a modem to the windows 7 pc you can do a search for realtek 8139 NIC drivers. If you are using an external modem, like a dsl modem or cable modem, and the modem has ethernet built in, then you will need to have the internet connection set up first. Otherwise your computer will not be able to access the internet without having the modem connected first. Then you can use a tool like WinHex to search for the right drivers. If you connect a desktop or laptop to an internal modem, you have to figure out if your computer is set up for internet access by default, or if you have to set up the connection in some way. If you have ethernet available at your computer, like an ethernet cable, you can connect that cable directly to the modem, and then connect your computer to it. Then search for the correct realtek 8139 NIC drivers. But note: if you do not have ethernet available at your computer, you will need to use the modem that came with your computer to connect to the internet.
