workflow is pretty similar as compared to autocad or autocad lt, with the notable exception of the 3d component, which allows for the creation of 3d models, and in particular 3d plans. the software has good import and export capabilities, and has a more limited export functionality than some competitors. in addition to the usual scalable and non-scalable objects, zwcad also includes several geometric objects such as points, lines, polylines, arcs, circles, and curves. this is done in a similar manner as with solidworks, in that you can create an arc or circle using the mouse, and then move it by using the arrow keys. zwcad does not have the ability to constrain the size of an object to a specific dimension. it's the same concept as with autocad and autocad lt, and there is a good interface with no apparent learning curve. the software has good import and export capabilities, and has a more limited export functionality than some competitors. in addition to the usual scalable and non-scalable objects, zwcad also includes several geometric objects such as points, lines, polylines, arcs, circles, and curves. this is done in a similar manner as with solidworks, in that you can create an arc or circle using the mouse, and then move it by using the arrow keys. zwcad does not have the ability to constrain the size of an object to a specific dimension. it is true that many of the available cad solutions were designed for pc-based use, but the zwcad architecture 2019 is the most ideal solution for cad engineers and the like because it is available in both pc and mobile, which makes zwcad architecture 2019 the ideal design software for everyone who needs to work between the computer and the mobile device.
