In the spirit of the 1st of the month, we're here with a fresh copy of the '1st of the Month' Linux software! This month's selection comes packed with exciting features, which include the now famous Click2Flash utility, LibreOffice, KBench, Media Player Classic, DVD Mount and lots more. This month's list is hosted in a brand new category, called '1st of the Month 2020'. For more info about the software, check out our previous posts, below: The new category is featured as a temporary listing in the sidebar. This is for its particular requirements and because the page hasn't reached the top of the first page yet. Once it reaches the top of the first page, the category will be placed into the sidebar permanently. Therefore, if you have previously bookmarked it, be sure to clear your bookmarks before going to the '1st of the Month 2020' page. Note: Some of the software titles listed in this category may be older versions. However, you may be able to find newer versions of them on the vendors' websites, as these are usually updated regularly. The new category has a number of requirements: - This is the first category on our site, so we want it to be especially well-behaved. Don't use this category to spam the site, for instance, or any other related problems. - Please make sure to keep it updated! We'll need to know about any updates, bug fixes, new features, etc. - Please keep the lists in a particular order. - Keep the lists short - ideally, only 2-3 entries per list. The following categories are not meant to be updated in real time, but after a short while. If you wish to make an addition to one of these lists, please do so, but they will not be added to the main website, until a few months after they're published. Linux software titles: Backup and restore software: Podcasts and videos: And that's all for today! Keep in

## What's New In Keriver 1-Click Restore Free?

Keriver 1-Click Restore Free is a practical application designed to offer people a convenient way of backing up and restoring their operating system. It will enable them to backup the system drive, create a baseline, incremental or differential snapshots and restore their OS in case things turn out in an unexpected manner. Simple interface that offers easy backup configuration through an accessible wizard Keriver 1-Click Restore Free comes packed with a basic interface, which right after the swift installation process, will prompt users with an initial backup configuration. This is highly useful, as it enables them to initiate the system backup process right away. Containing a recovery console, the application will require that people provide a drive where it can be stored, which must be a different one than the system partition. Once a preferred drive has been chosen, one can proceed with indicating a drive where the backups will be stored. Effortlessly backup and restore your system partition with this basic application Provided that they have selected the drives where the recovery console will be located and the backups stored, users can then proceed and take an initial system snapshot. Considering that the backup process can be completed in just three easy steps, Keriver 1-Click Restore Free could be a good solution for novice users. Looking on the downside of things, the application does have some minor shortcomings, for instance, it doesn't allow for setting up recurrent backups, on a scheduled basis. This might not be such an issue, but experienced users could request such a feature to be included.
