So far, Adobe Creative Cloud has been an excellent value for money proposition. Yes, for \$700, you can buy an entire online software suite that includes Photoshop and After Effects. If this bag of trickery sounds good to you, then Creative Cloud is probably a pretty good deal. The problem is that it has a habit of growing more and more expensive over time, and you still need to pay for another Adobe product when you want to use Photoshop on a PC. Speaking of each of these platforms, software releases on both platforms come pretty close to gratis on a yearly basis. When Adobe releases a major new version of the software, it's usually in the area of three or more updates of previews over the course of a year, and paid versions are usually released towards the end of the year, and near the time of the major release. The only things that really get a lot more expensive are when Adobe adds new features to their software that require new hardware to be used in post production. In this case, it is often in the area of the new hardware being released which will come with a substantial price increase in the software that uses it. As Canon EOS and Panasonic cameras keep getting more and more powerful, for example, Adobe will release a major update and add a slew of new features to their respective software. And you will probably find the updated software on the Mac App Store or the Adobe website, and on the Windows System i recommended. With regards to the Apple App Store versus the Adobe website, Apple holds the hammer in this case most of the time, but if you are planning on buying anything between \$300 and \$3,000 from Apple, you can access that software on the Adobe website as well. In short, you are better off buying things from Adobe on the website because you will get more support, more frequent updates, and better pricing.
