(1) WinPE boot ISO (2) WinPE license - I recommend the trial version of WinPE. You'll need to download it and burn it to a CD/DVD. You won't be able to use it with the trial version. (3) WinPE configuration - I recommend using the lastest (1.0.29) WinPE configuration file. Go to WinPE\WINPE\EXE and extract the file to your HDD (recommended). Make sure to copy the files you need instead of dragging and dropping them into the WinPE folder. (use WinPE\WIM1.wim if you are using a WIM file). (4) WinPE image - I recommend using the standard WinPE image included with WinPE 2.0 (WinPE_100.iso). This is the same image I used when I created the WinPE 1.0 image, so I know it works. Make sure to use the.iso file instead of the.wim file. (5) WinPE Patch - I recommend using the latest patch for WinPE 2.0 (Patch_100.zip). It will likely contain the latest fixes for the FAT32 bug. I use it with WinPE 2.0 all the time. If you are using a later version of WinPE (WinPE 2.0) you should probably use this patch instead. (6) WinPE user - I recommend using the lastest (WinPE 2.0.4) version of the user. Go to WinPE\User (the same place where the Windows command prompt is) and extract the.zip file. (7) WinPE boot - I recommend using the latest (WinPE 2.0.1) boot images. This is the same boot image I used when I created the WinPE 1.0 boot image, so I know it works. (8) WinPE 2.0 boot - I recommend using the latest (WinPE 2.0.0) boot image. Go to WinPE\WinPE (the same place where the Windows command prompt is) and extract the image to your HDD (recommended). Make sure to copy the files you need instead of dragging and dropping them into the WinPE folder. (9) Repair WinPE - I recommend using the Repair WinPE option. If you're using a later version of WinPE (WinPE 2.0) you
