With every new release of Adobe CS, Photoshop is evolving, becoming more seamless and fluid in how it does things. In this update, Adobe added the option to defer the foreground color with a new Feather option that will let you drag color over and out. And there's a new feature called Pixel Spy, which lets you see the exact colors of any pixel in your image. The release also includes the addition of the Clear Mask tool, which lets you use a selection to brush away parts of the canvas, so that you can mask those pixels. It's an easier way to start new layers. To preserve your design, the update adds two new templates (Universal Design and Mac Only), which give you adjust masks quickly. There are new stroke effects and new masking options to apply to text selections. And there are new data-aware automation features to make controlling your master and duplicate layers easier and more accurate. There's also a new option to upload and share your Photoshop files, along with additional features for GIMP and Luminar. "Photoshop CS6 is a testament to the incredible amount of passion, skill, and hard work Adobe engineers put into creating a truly innovative software program," says Inge Purall, Adobe. "This update is a glimpse behind the curtain to show you how this update came to be." What's the best choice for you? To get the content and features that exist, you can choose the standard version of Photoshop Lightroom (see review below) or upgrade to Photoshop Lightroom 5. One example of a new feature in Lightroom 5 that I am sure will be a draw to potential users is the release of it's Smart Mask feature in the original (non-phone) version of Lightroom 5. This feature allows the focus point you've selected in the image to be used in the masking. This can be used, for example, to select parts of an image that you want to save in a separate layer while masking out the rest. For enthusiasts this is definitely a great feature. I have not used the script to convert layers into smart objects yet, but I imagine it's probably pretty robust. Given that Lightroom 4 could only do the same task using a scripted programming language, it is a welcome addition.

In addition to showcasing advancements in peripheral products, Adobe also announced a roadmap for 2018 to enable Photoshop to co-exist with other digital file formats and content dissemination technologies. The team also debuted the ability to edit YouTube content directly in Photoshop, as well as a new collaboration interface that enables experts to work on the same project while collaborating with a host of other Adobe tools. Some of the new features that are the most important in 2018 are: Adobe's Photoshop is the most popular image editor that can be used to edit full-resolution images. It helps users in making the best out of the content that they are been given. It not only edits the text and colors on the images, but it also allows the users to create and apply new styles to the images without many worries. The new Photoshop also comes with powerful tools for new ways of getting content from tablet and smartphone to the desktop. The software allows the users to add their photo data regardless of the device they are using. Now the users don't need to be stuck in their desks for the entire day; they can easily have a different place to work from everywhere. Photo importing is still the pet peeve of users, for it takes a lot of work and time personally to get their favorite content from a mobile device straight into the desktop. There are many ways to make this work, but the best way is to use Photoshop. Image editing in the Adobe software world is quite complex, especially Photoshop. It takes a lot of time and effort to try to understand all the features within this software. It may seem rewarding at the beginning, but it

takes a lot of time to master the good use of the tools. It may seem hard to get good results, but users should not be disheartened by the difficulty of the process. The new Photoshop will help you in getting good results and making your own content better than ever.
