As of the.2 release, Photoshop is a lot faster, probably the more significant improvement than any in the rest of the app. It was much faster on my late model ipad pro to do some local work, edit a couple of titles, then go to the cloud editor and save. I don't think any of the new features in 5.2 are going to be a big time consumer, but the slight improvements in performance will have an impact. 1) I don't see any way in the cloud edition to see/edit notes for smart edits. from the Apple Help community:
"There aren't currently any apps available to share annotations in a smart collection at this time."

Looks like only the ones in the cloud are editable, there's no way to see a smart collection's notes in iOS. 3) Aside from the usual stability issues, in the latest release, there is the ability to leave the Photoshop app open over multiple Powerbooks. It's not stopping the desktop app from running, but I'm assuming the Powerbooks are going into sleep mode and the desktop app is able to keep control of the files opened. From the Help file:
"Supported Macs: Mac computers are supported with authoring on the same Mac or Apple TV that is connected to the same Wi-Fi network. The Apple TV is required for opening and saving documents from your iPad.
Supported Versions: Blackmagic Design DaVinci Resolve 14.3, Premiere Pro CC 2015 and above, PhotoFiltre 7 or later." 4) The video editor when editing with a mult-camera rig is much faster. The preview is much better as well. Overall, it's almost faster to edit video in the Spark editor. I don't know why it's so much faster yet still so much slower than the desktop editor, but it is.

Adobe Photoshop – Photoshop is the world's most popular and widely used full-featured graphic design application for editing, retouching, compositing and creating of photo-based or illustration-based images. Photoshop is the perfect platform for beginning and advanced users, from art students to professional photographers, artists, designers, and illustrators. With back-to-school well underway, now seems like a great time to catch up on CMS Elements 2013 Edition's most significant updates. If you're an established CMS Elements user, you should be aware that the update brings several welcome new capabilities, while also directly addressing several of the most common pain points experienced users have so far had to endure.

"In the digital realm, the traditions of illustration, graphic design and photography are taking on new forms," said Robin Williams, president of Adobe Images. "The line between traditional, digital and the new toon-medium is now blurred, yet Photoshop continues to help maintain its integrity and its place as the go-to software for working on images. The @Meta update is a natural evolution for Photoshop users.

It keeps the tools modern, and, at the same time, allows users to enhance their workflow and keep pace with the ever-changing world of digital media." If you are having a hard time to get out of the shop in Photoshop, the new Stay Close feature is for you. Simply open Stay Close, select Save as New from the Workspace menu and click Save Where You Were to welcome you with a new document. Using Stay Close, you can access recent files in the Design, Channels, Photo, or Wallpaper Places, or even a new document of your choice. One of the most powerful features in Photoshop CS6, the Liquify filter changes the appearance and content of selected areas of an image, distorting and moving pixels as well as what they contain. In this way, it is like drawing in the air with your fingers, bringing together parts of an image that normally would require physically separating them. The Liquify tool is intuitive and easy to use, and its flexible adjustment layer strips can be easily manipulated and combined with other tools. One approach to Liquify is to use a pencil and drawing tools to draw directly onto the image or use a 3D Path tool to trace a path first. The result is a sculpted, entirely digital hand-drawn freeform tool.
