When working as a designer or digital artist, using multiple Adobe applications at the same time can become a very normal practice. Adobe applications can be very taxing on any computer and more RAM helps to complete those tasks quickly. Having more RAM connected to your processor will ensure you have a highly optimized powerhouse computer to handle any and all Photoshop tasks. Ever since I was able to afford my own computer, I never purchased a computer with less than 16GB of RAM. Most computers nowadays come with at least 8GB of RAM which is sufficient. The one nice thing about RAM unlike a processor is that you can replace the RAM and add more after purchasing it. However, make sure to check this as again, companies like Apple have made it impossible to replace the RAM in their computers. It is always worth double checking! e3d0a04c9c
