You make a good point, Chris. I have been using LR for a long time these days, and, of course, it has grown. I think though there is a trend in many—not in all—image manipulation suites with a focus on aesthetics in the form of such features as layers, adjustment layers, vector art, and the like. These kind of features enhance the artistic side of editing, and probably put it right up there with the CR tool. I don't know, there's a lot to look forward to in LR5.2, but I do note that the quality of the previews is another way of likening the potential of a suite's usefulness to the representative of that suite's user base. I've been one of the lucky ones that has always achieved a good performance on LR, but I think it comes down to some combination of updating LR, Swatches, and other things along with hardware upgrades. A big thanks for writing such a thoughtful review. With a powerful selection engine in its CS6 update, you could say that everything is set. The interface might not grab your attention the way, say, InDesign does, but it's smart and clear. Because Photoshop is being aggressively pushed as a platform for desktop tools, it's not alone in the digital publishing world. But I'd still never imagine publishing a book or printing a magazine on Photoshop alone, which remains the realm of print publishers like CPG Media, Randall Publishing, and more. Any program that handles digital images must have a strong selection engine—and that's one of the reasons Adobe has successfully grabbed new customers, a reason why it's able to increase its yearly subscription price. It's easy to make changes in the ROPs (Radial Offset Paths) toolbox, and the 100 million plus people who use Photoshop will continue to tap into updates for support, not paid upgrades.
