With Photoshop, Adobe continues to make big swings and round the bases. Some of the changes are welcome, while others are not. Auto Sharpen is an example of the former. As for the latter, the update marries the old Exposure control with the new Auto Image Invert tool. A Where to Start screen shows static panels indicating that the main and Recent panels are now the same size. Users have more control than earlier versions by being able to change the layout of the panels. Users can work with collections of panels and move them between the two panels by dragging. The panels can also be rearranged. The panels include one menu pane, a Shared panel, the Contracts and Invitations panel, folders and subfolders, and the Navigation pane. A new feature, called "Machine Learning" is simply the name given to the AI that now analyzes images by using more than 50 different "machine learning algorithms" to distinguish between different types of pictures. Unfortunately, you cannot change the resulting categories. Even worse, your work is erased if you activate the new Create Collection feature. It's been a pleasure and honor reviewing the following products over the years: Adobe Bridge, Photoshop, Photoshop Elements, Photoshop Lightroom, Photoshop Creative Suite, Photoshop CS4, Photoshop CS5, Photoshop CS6. There's much more to a program than what appears at first sight, and I hope I was able to give you a fair look at the elements of the programs so that you will make an educated decision.
