One of the most important new features is the introduction of Document Recovery. Previously, when you lost a document of any kind, the Apple operating system erased it. But with the new feature, you can restore up to 10 past versions of a project. You simply pull the information out of the cloud and Canvas files that contain them. The cloud store will also retain all of your custom filters and any edits you've made on older versions of the project as long as they're in the cloud.

In this way, Photoshop document recovery becomes akin to the way the Share for Review option works to create a new cloud document. What's more, it's free in all paid versions, along with the ability to restore other types of documents, such as Microsoft Office files. If you recently lost a project, Adobe suggests that you see what's now available for cloud document recovery. The effort is a little dated, though, and it works well only for some older versions. And the Monitor plugin is dead, long live the Monitor plugin. Photoshop's new Monitor plugin is basically a tool to measure the dimensions and aspect ratio of images. You can now place images at different sizes or with different proportions, and tweak them, and the plugin will actually illustrate how much larger or smaller of the picture fits the new constraints. Also new: The Restaurant module. This tool lets you design a logo and order, letting you split up a long project into chunks for others to work on. The module offers a smart palette with menus, tool buttons, and markers that can be dragged and resized. It's a powerful tool for thinking about logo branding and how to break it down for others to tackle.
