Overall, I would say that the iPad Pro is the perfect tool for the creative world. It's a powerful device, both in functionality and price. That said, it is important to keep in mind that the iPad Pro should not replace or render the use of external devices. After all, the iPad Pro, like the new MacBooks, is still basically a display, keyboard, and trackpad — just a dedicated one, with a couple of additions that you have to assemble yourself. New features to boost efficiency. In version 23, Adobe added many efficiency improvements such as improved warp transforms, Smart Sharpen, live blur and even snap to grid. Photoshop CC also supports the most recent version of Photoshop Lightroom mobile, allowing you to share your photo library across the Web and iOS devices. You can also use Photoshop CC to enhance your images in real-time by using Adobe Photoshop Lightroom Remote so you can access your photo library from any Chromebook, iPad, or Android device. You can also save adjustments and retouch your image in the web browser and share them instantly. On the web, you can even view on mobile and tablet devices. It's also now easier to share your images with friends and colleagues. Just select Select Image > Share image URL then paste in your unique link on Facebook, Twitter or other sites. You can even use the free Adobe Stock images that you've already purchased at a special Creative Cloud pricing rate. Of course, all of your creative files are saved to the cloud inside your Creative Cloud membership. Even if you think you're protecting your confidential information, tapping into the Creative Cloud has no merit; Adobe gets your correspondence anyway. Since your personal files are all encrpted, you have to request access to the encrypted file that contains your sensitive data. Finally, Adobe has let you create a single folder that's shared amongst all versions of Photoshop you own to make saving documents and files a snap. For file types that Photoshop doesn't natively support, you can use the integration with Adobe Comp CC. A new Search feature in Photoshop CC gives you instant access to Photoshop content that's stored in another application, including the Creative Cloud Dashboard with all sharing opportunities, panorama/video frames, or even Smart Objects.

Over the last three years, Chrome has been working to empower web applications that want to push the boundaries of what's possible in the browser. One such web application has been Photoshop. The idea of running software as complex as Photoshop directly in the browser would have been hard to imagine just a few years ago. However, by using various new web technologies, Adobe has now brought a public beta of Photoshop to the web. (If you prefer watching over reading, this article is also available as a video.) **What It Does:** One of the big differences between Lightroom and Photoshop is the way that you work with images. Lightroom is a library of content. You can add and edit images, delete certain portions, and do other things all from the comfort of the app. Once you're done, the image is automatically saved to your Lightroom Library. In Photoshop, you need to open and save your images individually. You also can't see what's inside the library in Adobe Photoshop. You need to use the image browser, which is a bit cumbersome and slow. It's also not great for working with multiple images at the same time. e3d0a04c9c
